The Uniquely Complete Safety Service to Industry

HEALTH & SAFETY TRAINING

We deliver Training on a wide range of Safety related topics including;

Safe method of Manual Handling, to teach operatives how to Lift, Pull, Carry and Move large or Heavy objects.

Abrasive Wheel Use, teaches the correct fitting, adjustment and safe use of Abrasive Wheels as well as the legal requirements.

Portable Power Tools Use, teaches the correct and safe use of a range of power tools such as Portable Drills and Saws.

COSHH Assessments, we offer courses teaching the safe use of Hazardous Materials in the Workplace and the carrying out of Assessments as well as a course training others to carry out COSHH assessments.

Working at Heights, teaching the safe and appropriate use of access equipment, how to comply with legislation and how to manage the Risk of work at height activity.

Fire Marshal, teaching fire evacuation procedures, fire drill procedures, use of extinguishers, fire assembly procedures, all to the latest legal requirements.

Mobile Towers, teaching the safe use and erection of Mobile access towers to the PASMA standard.

Fork Lift, teaching the safe use of Forklift trucks, to the legal standards, we offer both full and refresher courses.

Carrying out in house Risk Assessments, teaching others to carry out their own Assessment of Workplace Hazards to the approved legal standards. Training may be carried out in House or at our new Training Centre in Manchester.

RISK ASSESSMENTS

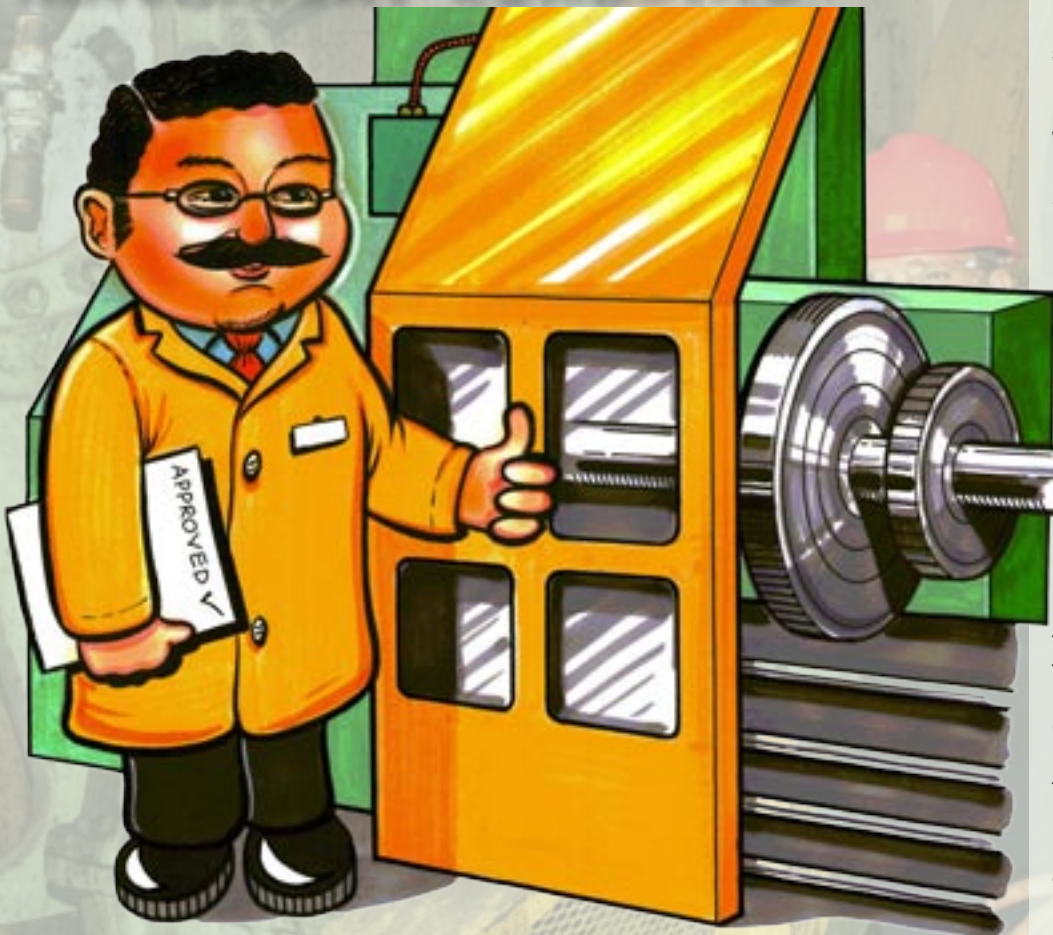

Our fully qualified Consultants can visit your site and carry out a full and comprehensive Risk Assessment on all of your Machinery as well as your Manufacturing and Operating Procedures,

RDM are Industrial Safety Specialists with over 50 years experience, so we are uniquely able to advise you on the latest HSE legislation.

We will issue you with detailed documentation, a report and even training to help you implement the correct safety procedures.

MACHINERY GUARDING

RDM has a number of specialist skills that enable us to offer a unique solution to the problems of MACHINERY GUARDING. Where the safety of operators is required, Machinery Guarding Systems are essential.

RDM Machine Guards provide an effective safety barrier, preventing any hazardous contact with the moving parts of the machinery whilst it is in operation. RDM offers both a standard product range and a custom design and manufacture service, since we know that many Machines require a more specific and individually tailored solution.

Our service begins with a thorough survey of your machinery followed by a presentation of our recommendations. Custom Guards are designed and manufactured in our modern factory and may be installed on site by our experienced engineers. RDM Machinery Guarding Systems are designed to comply with the Health and Safety at Work Regulations.

DC Injection BRAKING SYSTEMS

There are many situations where it is not enough or perhaps not practical to fit mechanical guards. That is when you will really appreciate the benefits of **DRIVLOC** because nothing stops a machine faster, more positively or more effectively.

Drivloc was developed by RDM over Forty years ago, and is now in regular use all over the world. In the UK alone there are over 30,000 systems installed, both as a safety feature and in many cases as a production aid.

Drivloc utilises the well proven principle of applying a D.C. voltage

to the stator windings of an A.C. induction motor, which produces an extremely efficient braking torque. Smooth, high speed emergency braking however is only one of the benefits you get.

The **DRIVLOC** system has No mechanical moving parts this means there are no wearing parts to affect braking performance and minimises maintenance. Drivloc can be retro fitted to any machinery with A.C. motors up to 200hp, and is easily adjusted to match the load to be braked.

Drivloc frequently offers a very low cost and simple solution to the problem of Machinery Safety.

Contact RDM today for expert advice and friendly, professional service.
